

Censored Models in EViews

Ass.Prof. Andriy Stavvytskyy

Data

- ▶ File: Censor.wf1

Description

- ▶ Hrs – wife working hours per year
- ▶ Edu – years of education of wife
- ▶ Age – age of person in years
- ▶ Kid1 – number of children aged 0 to 5

Model

- ▶ Suppose that we wish to estimate the model:

$$Hrs_t = \beta_0 + \beta_1 Age_t + \beta_2 Edu_t + \beta_3 Kid1_t + \varepsilon_t$$

where hours worked (HRS) is left censored at zero

Estimating Censored Models

Equation Estimation ×

Specification Options

Equation specification
Dependent variable followed by list of regressors, OR
a linear explicit equation like $Y=c(1)+c(2)*X$.

hrs c age edu kid 1

Distribution

Normal
 Logistic
 Extreme Value

Dependent variable censoring points
Enter a number, a series, a series expression, or blank for no censoring

Left: 0
Right:

Left & right points entered as:

Actual censoring value
 Zero/one censoring indicator

Truncated sample

Estimation settings

Method: CENSORED - Censored or Truncated Data (including Tobit) ▼

Sample: @all

Limit Points Known

- ▶ Left edit field: 0
- ▶ Right edit field: [blank]

- ▶ Left edit field: [blank]
- ▶ Right edit field: 20000

- ▶ Left edit field: 10000
- ▶ Right edit field: 20000

- ▶ Left edit field: lowinc
- ▶ Right edit field: vcens1 + 10

Limit Points Not Known

- ▶ This situation often occurs with data where censoring is indicated with a zero–one dummy variable, but no additional information is provided about potential censoring points.
- ▶ Simply select the Field is zero/one indicator of censoring option in the estimation dialog, and enter the series expression for the censoring indicator(s) in the appropriate edit field(s).
- ▶ Left edit field: [blank]
- ▶ Right edit field: rcens

Output

OK Cancel

To forecast the expected latent variable, click on **Index – Expected latent variable**.

To forecast the expected observed dependent variable, you should select **Expected dependent variable**.

Tests of Significance – 1

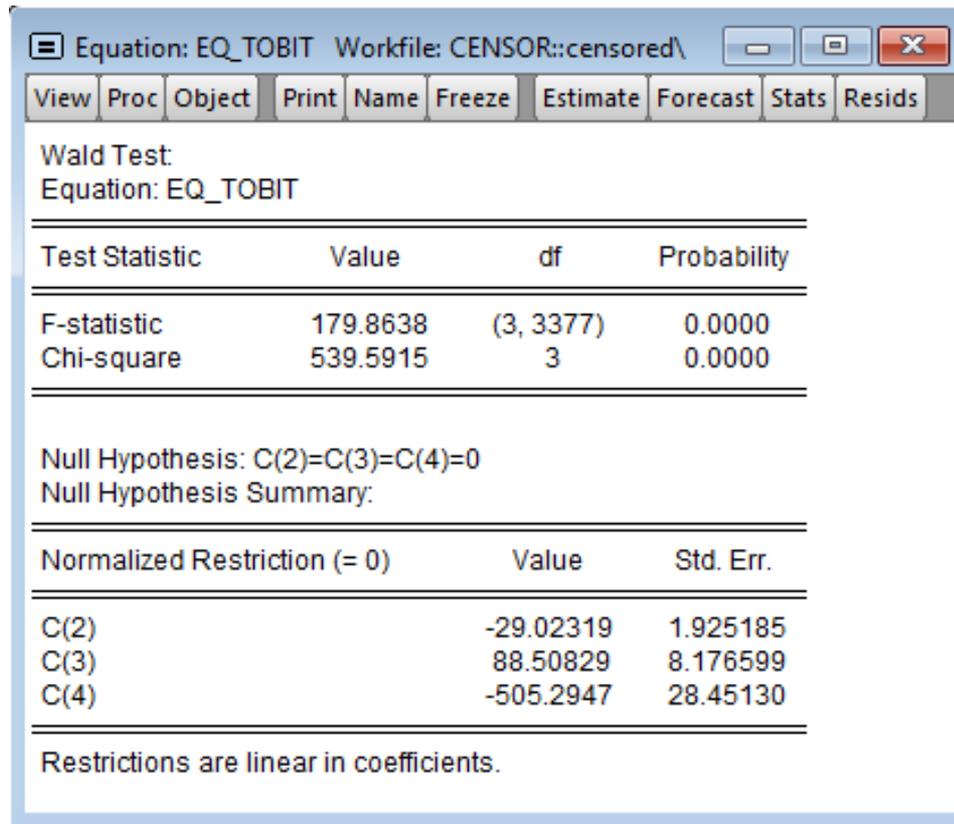

- ▶ EViews does not, by default, provide you with the usual likelihood ratio test of the overall significance for the tobit and other censored regression models.
- ▶ We can use the built-in coefficient testing procedures to test the exclusion of all of the explanatory variables. Select the redundant variables test and enter the names of all of the explanatory variables you wish to exclude. EViews will compute the appropriate likelihood ratio test statistic and the p-value associated with the statistic.

Tests of Significance – 2

- ▶ To take an example, suppose we wish to test whether the variables contribute to the fit of the model. Select **View/Coefficient Diagnostics/Redundant Variables – Likelihood Ratio...** and enter all of the explanatory variables:

$$c(2)=c(3)=c(4)=0$$

Tests of Significance – 3

Equation: EQ_TOBIT Workfile: CENSOR::censored\

Wald Test:
Equation: EQ_TOBIT

Test Statistic	Value	df	Probability
F-statistic	179.8638	(3, 3377)	0.0000
Chi-square	539.5915	3	0.0000

Null Hypothesis: C(2)=C(3)=C(4)=0
Null Hypothesis Summary:

Normalized Restriction (= 0)	Value	Std. Err.
C(2)	-29.02319	1.925185
C(3)	88.50829	8.176599
C(4)	-505.2947	28.45130

Restrictions are linear in coefficients.

The reported statistic is 179.86, with a p-value of less than 0.00001.

Estimating a Truncated Model

Estimation of a truncated regression model follows the same steps as estimating a censored regression:

- ▶ Select **Quick/Estimate Equation...** from the main menu, and in the Equation Specification dialog, select the **CENSORED estimation method**. The censored and truncated regression dialog will appear.
- ▶ Enter the name of the truncated dependent variable and the list of the regressors or provide explicit expression for the equation in the Equation Specification field, and select one of the three distributions for the error term.
- ▶ Indicate that you wish to estimate the truncated model by checking the **Truncated sample option**.
- ▶ Specify the truncation points of the dependent variable by entering the appropriate expressions in the two edit fields. If you leave an edit field blank, EViews will assume that there is no truncation along that dimension.

Keep in mind

- ▶ Truncated estimation is only available for models where the truncation points are known, since the likelihood function is not otherwise defined. If you attempt to specify your truncation points by index, EViews will issue an error message indicating that this selection is not available.
- ▶ EViews will issue an error message if any values of the dependent variable are outside the truncation points. Furthermore, EViews will automatically exclude any observations that are exactly equal to a truncation point. Thus, if you specify zero as the lower truncation limit, EViews will issue an error message if any observations are less than zero, and will exclude any observations where the dependent variable exactly equals zero.

Heckman Selection model

- ▶ The wage equation is given by

$$wage_t = \beta_0 + \beta_1 Exper_t + \beta_2 Exper_t^2 + \beta_3 Educ_t + \beta_4 City_t + \varepsilon_t$$

where EXPER is a measure of each woman's experience, EDUC is her level of education, and CITY is a dummy variable for whether she lives in a city or not.

- ▶ The selection equation is given by:

$$LFP_t = \gamma_0 + \gamma_1 Age_t + \gamma_2 Age_t^2 + \gamma_3 Faminc_t + \gamma_4 Educ_t + \gamma_5 Kids_t + u_t$$

where LFP is a binary variable taking a value of 1 if the woman is in the labor force, and 0 otherwise, AGE is her age, FAMINC is the level of household income not earned by the woman, and KIDS is a dummy variable for whether she has children.

Data

- ▶ File: heckit.wf1
- ▶ In this data, the wage data are in the series WW, experience is AX, education is in WE, the city dummy is CIT, labor force participation is LFP, age is WA, and family income is FAMINC. There is no kids dummy variable, but there are two variables containing the number of children below K6 education (KL6), and the number of kids between K6 education and 18 (K618). We can create the dummy variable simply by testing whether the sum of those two variables is greater than 0.
